DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1 – 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1 it is unclear how the preamble terminology “phases” relates to the enactment of discrete steps. Additionally it is unclear how the reflected signals relate to curved/straightened images since apparently the method is directed to focus processing prior to forming the eventual image. Additionally in claim 4 it is unclear whether the “transverse compression” of line 1 is related to the term as it appears in claim 1. Dependent claims variously inherit the defects.

No rejection is provided on art however the following are cited as of interest:

Alexandru (US6704438) is directed to forming Fourier and inverse Fourier transforms during pulse compression processing. Benitz (US6608585) is directed to high resolution imaging along range and cross-range using pulse compression. ~~Li~~ *Shuoh* (US5935068) is directed to aberration compensation using amplitude compression and frequency domain techniques. Shippey (US5793703) is directed to pulse compression during synthetic aperture imaging..
